School Administrator Training

01 / ORIENTATION

Know the workspace before you configure it

The dashboard shows school health; the sidebar takes you to each workflow.

- 1 Top navigation - profile, notifications and account controls
- 2 Sidebar - people, academics, finance, results and operations
- 3 Dashboard - totals, alerts, review queues and quick actions
- 4 Current session and term - the context used across academic records

Rule: confirm the current session and term before entering attendance, fees or results.

02 / FIRST-TIME SETUP

Configure the academic structure once

Complete these items in sequence. Later records depend on them.

- 1 Add the school name, address, contact details and branding
- 2 Create the academic session and terms, then mark the current period
- 3 Create levels/classes and sections used by the school
- 4 Add subjects and assign them to the right classes
- 5 Register staff before assigning teaching responsibilities
- 6 Import or register students after the structure is ready

Do not create duplicate classes or subjects to solve naming mistakes. Edit the existing record.

03 / PEOPLE

Keep one reliable record for every person

Accurate people data reduces result, billing and communication errors.

Students

- Register individually or import in bulk
- Assign class, section and admission number
- Link parent/guardian details
- Update status when a learner leaves

Staff

- Create teacher and bursar accounts
- Use role-based access
- Assign classes and subjects
- Deactivate access when employment ends

Parents

- Use a valid phone number and email
- Link the correct children
- Confirm login/contact details
- Avoid duplicate guardian accounts

Minimum data standard: full name, unique identifier, class/role and a reachable contact.

04 / FEES

Turn fee setup into a clean collection process

Define obligations first, record money second, reconcile every day.

- 1 Create fee types with clear names and amounts
- 2 Apply fees to the correct class, session and term
- 3 Review student invoices before sharing payment instructions
- 4 Use online verification or record approved offline payments
- 5 Download or print receipts for confirmed transactions
- 6 Use reports to follow balances, exceptions and reconciliation

Never mark a payment successful because a parent shows a debit alert. Verify the transaction or bank record.

05 / RESULTS

Publish results through a controlled review cycle

GradeQuest separates score entry from approval and publication.

- 1 Confirm subjects, students, grading scale, session and term
- 2 Teachers enter or upload scores for assigned classes
- 3 Compute results and open the broadsheet for review
- 4 Resolve missing scores, anomalies and high-severity alerts
- 5 Approve only after the review status is ready
- 6 Publish, generate access PINs and confirm the public result view

Use the review queue as the release gate. Published mistakes damage trust and create avoidable support work.

06 / ATTENDANCE

Capture attendance where the school can act on it

Daily records become useful only when exceptions are reviewed.

Student attendance

- Select the correct date and class
- Mark present, absent or late
- Save once and verify the summary
- Follow up repeated absences

Staff attendance

- Use manual or QR attendance
- Confirm clock-in records
- Review exceptions
- Limit QR access to authorized staff

Set a daily attendance deadline and assign one person to review missing classes.

Send messages from trusted school data

Use notifications and WhatsApp for purposeful, auditable communication.

- 1 Choose the correct audience: school, class, staff, parent or individual
- 2 Write a clear subject and one required action
- 3 Preview phone numbers and credit balance before bulk WhatsApp
- 4 Send a small test when using a new template or gateway
- 5 Review delivery status; retry only failed recipients
- 6 Protect parent data - never export contact lists casually

Keep operational messages short: what happened, who is affected, what to do and the deadline.

Prepare assessments before students arrive

Online and offline CBT need the same disciplined setup.

- 1 Set title, subject, duration, instructions and availability window
- 2 Add or import questions and verify answers
- 3 Assign the correct class or candidate group
- 4 Test with a non-admin user on the target device/network
- 5 Monitor the session and record genuine incidents
- 6 Close the assessment, review scores and export where required

Run one device and network rehearsal before every high-stakes CBT session.

Manage hostel and transport as live registers

These modules should answer who is assigned, where, and whether capacity is safe.

Hostel

- Create hostels and room inventory
- Set room capacity
- Assign and move residents
- Record check-in/check-out
- Review occupancy and available beds

Transport

- Create vehicles and routes
- Add stops and schedules
- Assign drivers and students
- Track capacity and status
- Review active assignments

Never delete a room, route or vehicle with active assignments. Close or reassign records first.

Protect continuity before subscription deadlines

Admins should understand package limits, wallet usage and renewal status.

- 1 Open billing to confirm the active package and renewal date
- 2 Monitor WhatsApp credit and other wallet-funded services
- 3 Review plan limits before onboarding a large intake
- 4 Renew early enough for payment verification and support
- 5 Keep one authorized billing contact for the school
- 6 Contact support with the school name, transaction reference and timestamp

If payment verification times out, do not pay twice. Wait briefly, refresh billing and send the transaction reference to support.

Resolve issues without weakening security

Good support starts with a complete, reproducible report.

Account safety

- Use named accounts - no shared admin login
- Grant only required permissions
- Remove leavers promptly
- Confirm before deleting or publishing

Support request

- State the page and action
- Include date/time and affected user
- Attach the exact error message
- Add a screenshot without passwords
- Include transaction/reference IDs

Support path: Dashboard or sidebar > Support. Avoid sending passwords, PIN batches or private student files in chat.

Use a repeatable operating rhythm

Small checks prevent most end-of-term emergencies.

Daily

- Review dashboard alerts
- Check attendance gaps
- Reconcile confirmed payments
- Monitor failed messages

Weekly

- Review incomplete profiles
- Check result submission progress
- Audit staff access
- Review hostel/transport capacity

Term close

- Resolve result alerts
- Approve then publish
- Export key reports
- Confirm backups and next term setup
